

Interdisciplinary approach to electronic monitoring of the accused and convicted persons in the Slovak environment (IPEMOS)

Project Number: APVV – 15 - 0437

Duration: July 2016 – June 2020

Total planned expenditure: 191 561€

Type of the Project: APVV

Implemented by: Department of Penal Law, Criminology, Criminalistics and Forensic Sciences, Faculty of Law

The project deals with highly current issues of socio-economic significance. The project aims at defining and reviewing new theoretical and practical approaches to electronic monitoring of people and its evaluation through a wide range of scientific methods. The main scientific objective of the project is to examine the process of electronic monitoring of accused and convicted persons; to analyze and evaluate the process of their resocialization from the point of view of elimination and prevention of crime; economic efficiency and effectiveness of inclusion of these persons in society compared to the standard performance of detention. The originality of the project lies primarily in the application of an interdisciplinary approach to the examination of the given issue, the fulfillment of the project objectives and the project activities as well as the interdisciplinary composition of the team.
